

WHAT IS THE WT6300 WEARABLE COMPUTER?

The ultimate industrial wearable computer for hands-free mobility

With the explosion of ecommerce, picking and sorting have become full time jobs, not only in the warehouse, but in the retail store, where orders placed online need to be ready for pickup in as little as two hours. Empower your pickers and sorters to handle it all with ease with the hands-free WT6300. Building on Zebra's WT6000, the WT6300 offers new features that take productivity and order accuracy to the next level, including a keypad option that provides a familiar interface for manual keyed input, lightning fast application performance with significantly more processing power and memory, improved WiFi support for 'no-drop' dependable connections and more. The WT6300 — empowering your workers to keep pace with the ecommerce explosion.

WHY SHOULD YOU BUY THE WT6300?

TOP 5 CUSTOMER BENEFITS

1

Get up to 30% more orders out the door every day.¹

When you combine the WT6300 with a Zebra ring scanner, you get a completely hands-free solution. Now, workers always have both hands free to handle items — there's no need to pick up and put down a mobile computer to scan items to ensure accurate picks and maintain accurate inventory counts. The result? The frictionless and continual picking that boosts productivity, allowing workers in the warehouse and associates in the retail store to pick up to 30% more orders, every day.

2

Unbelievable comfort — and up to 50% less muscle effort.¹

The WT6300 is built to deliver unmatched comfort. It's one of the lightest devices in its class. It has a very low center of gravity that, when combined with a Zebra ring scanner, cuts muscle effort in half, minimizing fatigue and maximizing productivity. And the micro-adjustability of the best-in-class mounting system alleviates pressure points and enables a perfect fit on any size arm.

3

Rugged for reliable operation — everywhere.

The WT6300 is dustproof, ideal in warehouse aisles. It's water-resistant — you can even spray it down with a hose. It's drop and tumble tested, ready to handle all of the inevitable drops and bumps throughout the workday. It's the only device in its class that can be used in the freezer. The most vulnerable component, the display, is protected with the industry's strongest material — Corning® Gorilla® Glass — providing maximum scratch and shatter resistance. And the touchscreen automatically adjusts touch sensitivity as needed for gloved hands.

4

Easy transition from your legacy wearables.

With the optional keypad, you can still give your workers the same data entry experience they have today on their legacy Windows CE devices — and the entire display is available for more information-rich app screens. The result? Your workflows can remain the same and your app screens can keep the same look and feel. That means no training, no ramp up time, no reduction in productivity. And upgrading from the WT6000 is cost-effective, since your accessories will work with your WT6300 devices.

5

More options for more productivity.

Get more out of your WT6300 with value-added options and benefits. Add push-to-talk with a rugged HS2100 or HS3100 headset for better collaboration. Add superior hands-free scanning and first-time every-time barcode data capture with a Zebra ring scanner. Multi-Barcode Scanning lets workers capture multiple barcodes with a single scan. And with FulfillmentEdge™, a ring scanner and Zebra's HD4000 Head-Mounted Display, workers can pick 24% more orders per day through dynamic workflows and real-time directions that are projected in front of a worker's field of view.²

APPLICATIONS

Warehousing/Distribution/Transportation and Logistics

- Receiving/picking/packing/replenishment/staging
- Carton put away
- Truck loading/unloading
- Returns management

Retail

- Back of store bulk order picking
- Front of store online order picking
- Price audits/changes
- Store receiving
- Inventory management
- In-store communications

Manufacturing

- Inventory management
- Line-side replenishment
- Parts tracking

ROI

- Up to 30% increase in productivity¹
- Up to 50% reduction in muscle movement, minimizing fatigue¹
- Improved task accuracy
