

Datacard® ViaNet® Identity Information Software

Improve security and cut costs across your worldwide enterprise

Datacard® ViaNet® identity information software allows authorized users to instantly access photos and identity information from a centralized database for a variety of applications. Photos and data can be used to print secure ID cards, verify identities at facility entrances or authenticate people who want access to your databases, networks or e-business tools.

All photos and identity information are stored in a central database. Managing a single identity resource instead of multiple databases greatly reduces operating and maintenance costs. Also, a central database provides security personnel and other authorized users with up-to-the-minute information. So, they can make better, faster decisions.

A proven solution for security-minded enterprises in a variety of markets

ViaNet® software is the world's best-selling identity network solution. For more than five years, corporations, schools, government agencies and other enterprises have used it to improve security and cut costs. Integrate ViaNet software into your enterprise security system and discover how the powerful, easy-to-use database software can be the starting point for entirely new and much more effective secure identity programs.

Leverage industry-leading photo ID solutions

ViaNet software operates with the latest photo ID software platforms—including Datacard® ID Works® identification software packages—for a multitude of possible card designs and formats. ViaNet software also offers full compatibility with the Datacard® family of plastic card printers—the world's best-selling brand.

Datacard® identification software is designed with the user in mind. We offer many features that simplify the process, including pre-defined list fields, drop-down menus and data-driven condition selection to make the user interface extremely easy to learn and use.

Custom secure identity reports arm you with critical information

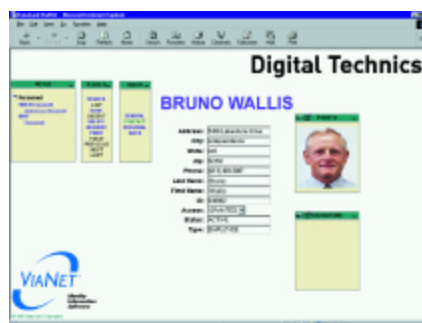

ViaNet software gives you the ability to design, view and print reports that meet your specific security requirements. For example, you can print full-color employee or student rosters or track the issuance of secure ID cards. Templates can be created with multiple or single records per page, in either portrait or landscape orientation.

Flexible licensing to meet your needs

Security authentications do not always come one at a time. Many times, multiple parties simultaneously request clearance from multiple locations. Our flexible licensing model lets you enable a small group of users to access the ViaNet software database concurrently, so they can respond to security needs immediately. And because the database is Internet-based, users can logon from anywhere in the world. ViaNet software keeps pace with your changing needs by allowing you to add licenses as your organization grows.

Part of a complete identity solution

Datacard offers the world's most complete portfolio of secure identity solutions. ViaNet software is fully compatible with all of our offerings, including desktop card printers, digital cameras, biometrics capture devices, signature pads and other identity software products.

Datacard® ViaNet® Identity Information Software

Standard features

- Internet and intranet compatibility
- Interfaces with ODBC-compliant databases:
 - Oracle®
 - Microsoft® SQL Server™
 - Microsoft® Access
- Photo ID software-compatible card formats:
 - Datacard® ID Works® identification software
- Supports industry-leading card printers:
 - Datacard® SP35 card printer
 - Datacard® Select™ Platinum® Series card printers
 - Datacard® Magna™ Platinum™ Series card printers
 - Datacard® ImageCard® IV card printer
- Password security
- Multiple security levels
- Query screens—up to seven variable fields
- Unlimited views with multiple fields
- Supports JPEG, GIF or WMF image formats
- Multiple database support within a single ViaNet application
- Configurator “Wizard” for customizing user interface (any Windows®-support language or industry-specific terminology)
- Custom on-screen graphics and logos
- Documentation, installation, training and help desk support

Specifications

- Recommended Internet/server requirements:
 - Pentium® III
 - 256 MB RAM
 - 3.0 GB hard drive
 - 20X CD-ROM drive
 - Microsoft® Internet Information Services v5.0 or greater
 - Microsoft® Internet Explorer v5.5 or greater
 - Microsoft® Windows® 2000 Server operating system
- Recommended workstation requirements:
 - Microsoft® Internet Explorer v5.5 or greater
 - Screen resolution: 800 x 600 dpi (minimum)
